

# Data delivery information

## 1 Quality

In order to achieve ideal printing results, print data is required in excellent quality.

## 2 Data transfer

E-mail: [repro@itwids.com](mailto:repro@itwids.com) or [j.tsialastras@itwids.com](mailto:j.tsialastras@itwids.com)  
FTP server: Download from your FTP server  
(provide access information)  
Data carriers: CD-ROM, DVD (data carriers will not be returned)  
In the event of an on-site visit: USB stick, external hard drive with USB connection

## 3 Conditions

- For checking purposes, enclose a JPG file of the complete graphic.
- Any images embedded within graphics (TIFF, JPG, BMP, etc.) must also be supplied.
- Convert all texts (scripts) into paths.  
There are thousands of fonts for the Apple and Windows operating systems. Many of the fonts are subject to licensing and must be purchased. The prices for entire font families may amount to hundreds or thousands of Euros. For this reason, it is important to convert the scripts into paths (vectorisation). In doing so, the fonts are converted into geometric shapes. Otherwise, all fonts used must be made available to us.

## 4 Software and formats

Files from programs running on the Mac or Windows operating systems as listed below may be used.

- Adobe Photoshop CC .tiff, .jpg (min. 300dpi, recommended 600dpi and higher)
- Adobe Illustrator CC .ai, .eps
- Corel Draw .cdr
- from CAD programs .dwg, .dxf (2D files)
